Kenya's Economy, 2000–2025

Twenty–five years of growth, price stability and currency pressure, from World Bank World Development Indicators

4.4%

Average real GDP growth

2000–2025, 21 of 26 years above 3%

$2,363

GDP per capita, 2025

5.7x since 2000 (7.2% a year, current US$)

4.1%

CPI inflation, 2025

Peak: 26.2% in 2008

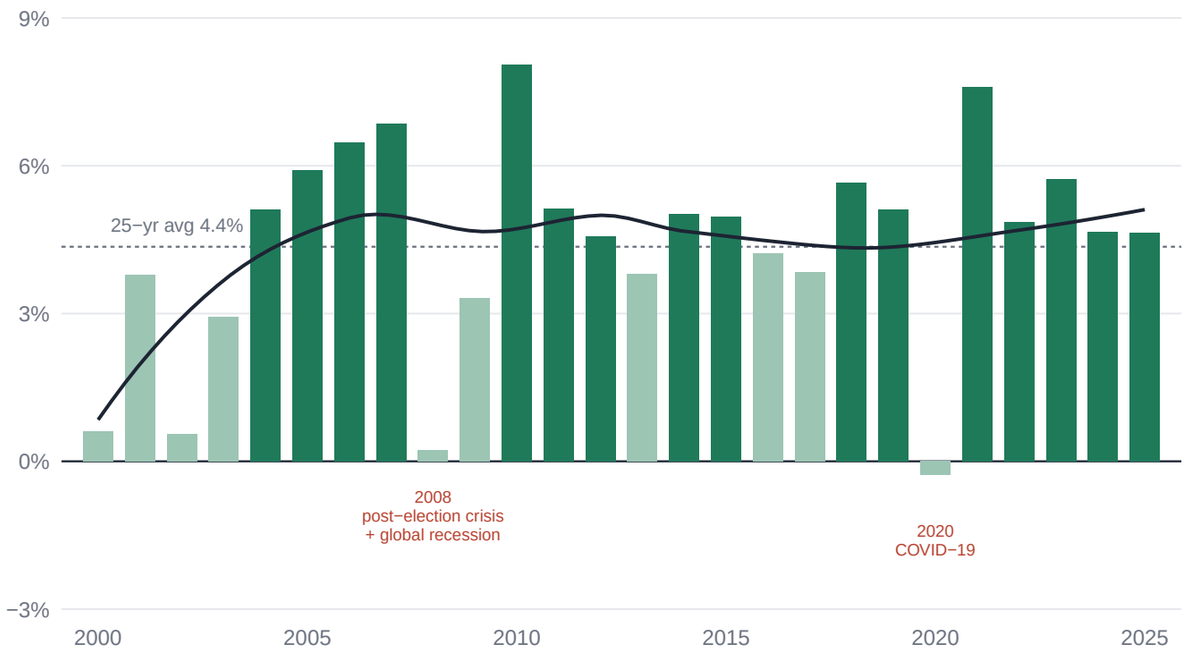
KES 129

Per US dollar, 2025 average

Shilling lost 41% of its value vs 2000

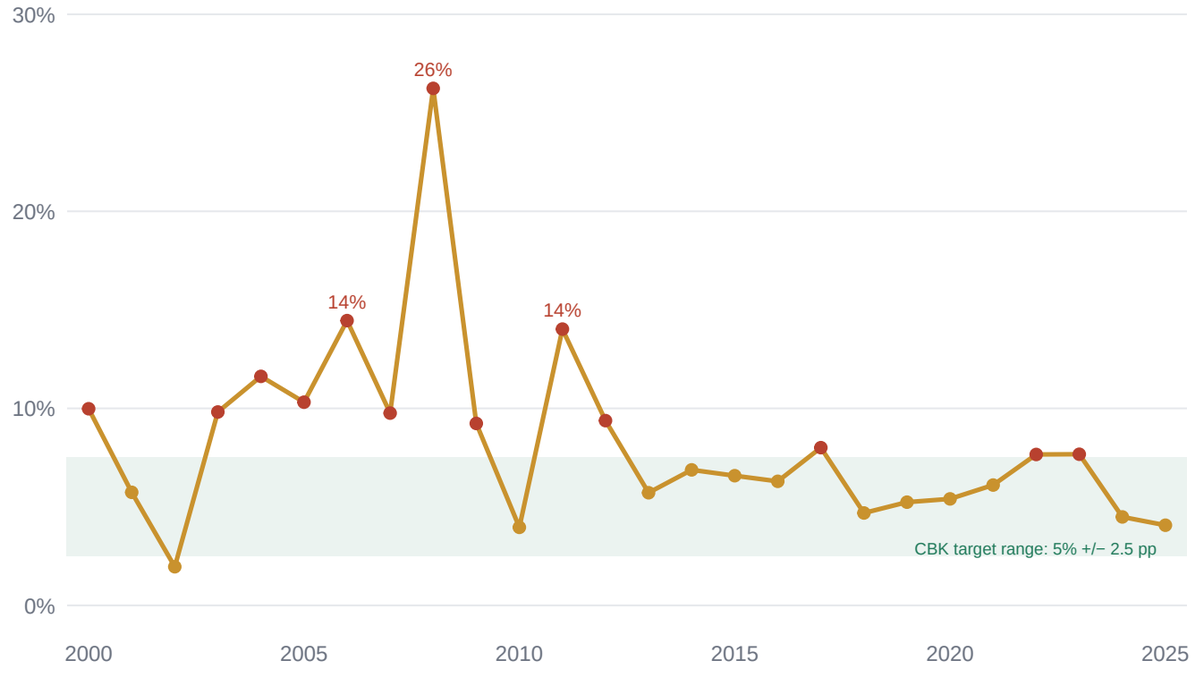
Resilient growth, punctuated by shocks

Real GDP growth, % per year. Dark bars beat the long–run average; line is a LOESS–smoothed trend



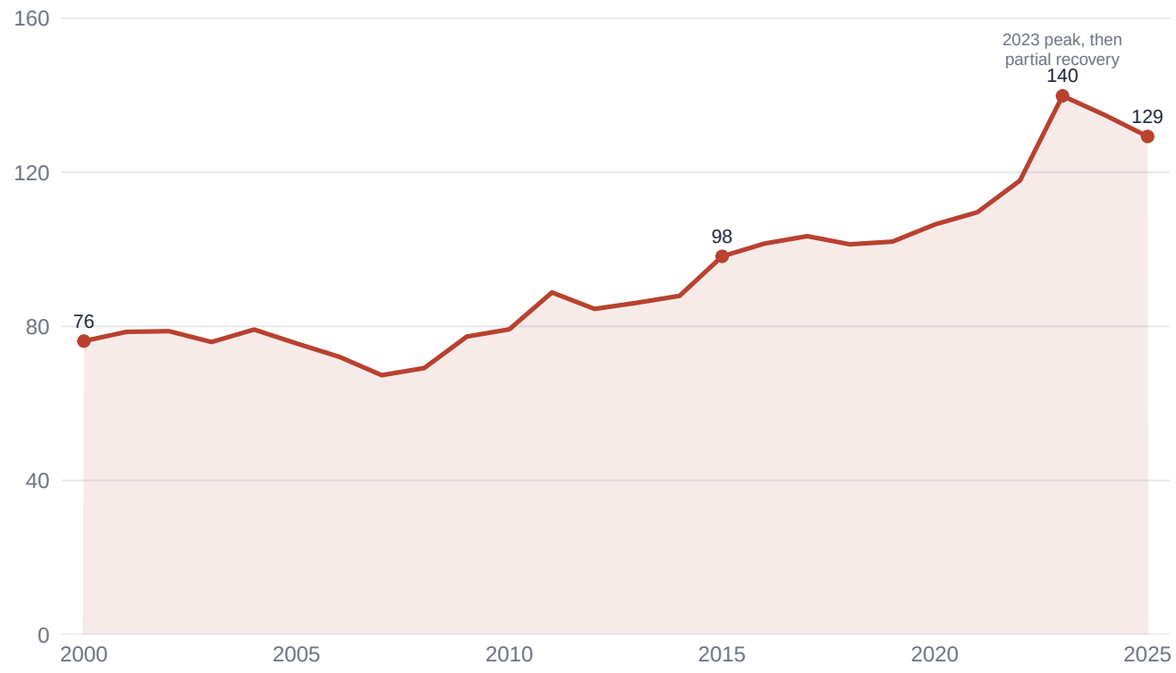
Inflation has been tamed since the early 2010s

Consumer price inflation, % per year. Red points sit above the target range



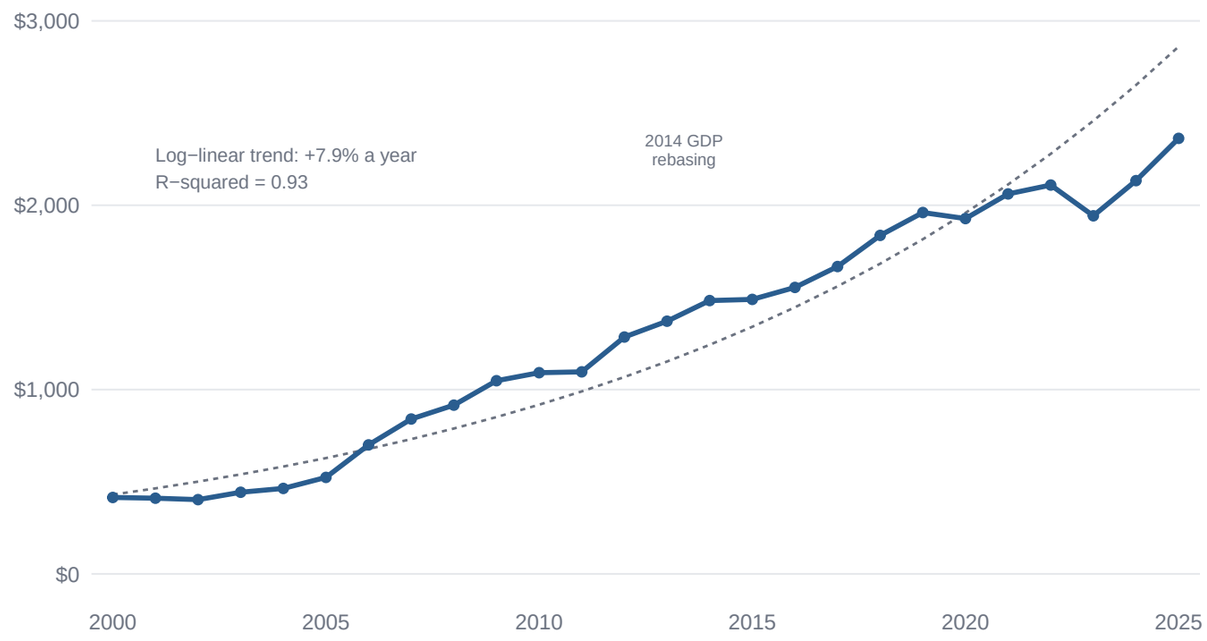
A steadily weaker shilling

Official exchange rate, Kenyan shillings per US dollar (annual average)



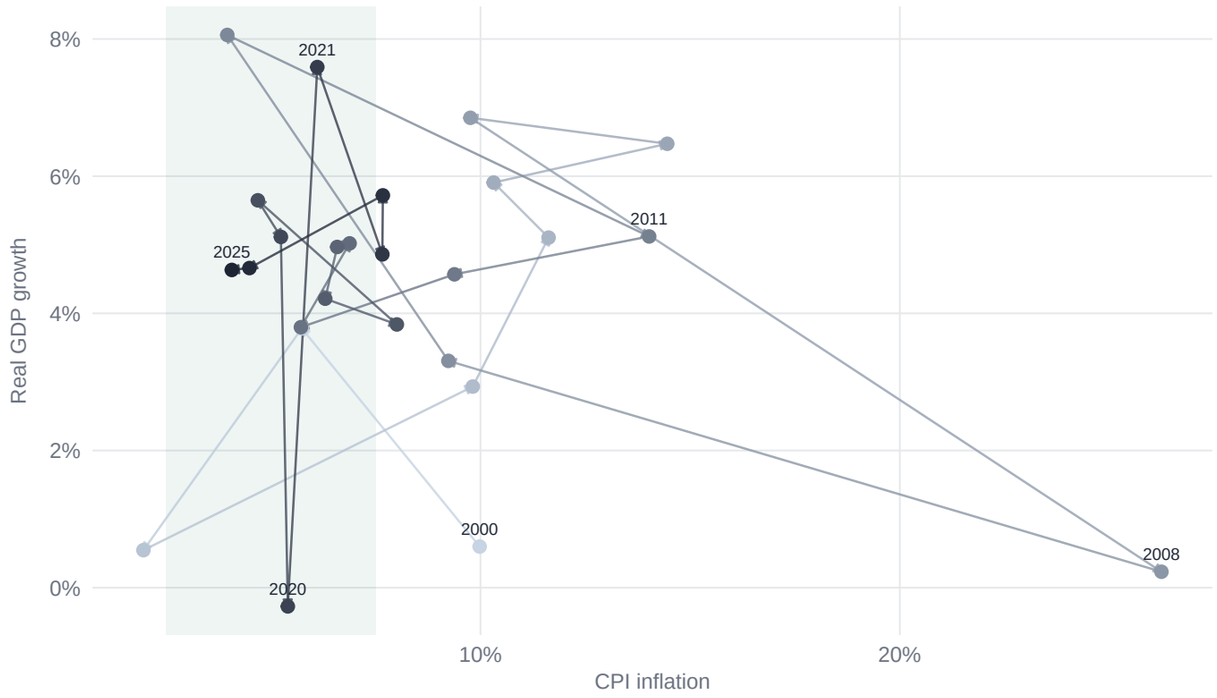
Average income has grown more than fivefold

GDP per capita, current US$. Dashed line: exponential trend fitted by OLS on log values



From volatile to stable: the growth–inflation path

Each point is a year (darker = more recent). Recent years cluster in the target band with ~5% growth



Farming still a fifth of GDP; diaspora money rising

Agriculture value added and personal remittances received, % of GDP
